Third-party Verification
Independent third-party verification of the declaration and data, according to ISO 14025:2006, via: ☒ EPD process certification* without a pre-verified LCA/EPD tool Third-party verifier: *Certiquality Srl* Accredited by: *Accredia* *EPD process certification involves an accredited certification body certifying and periodically auditing the EPD process and conducting external and independent verification of EPDs that are regularly published. More information can be found in the General Programme Instructions on www.environdec.com.
Procedure for follow-up of data during EPD validity involves third party verifier: ☒ Yes ☐ No

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but published in different EPD programmes, may not be comparable. For two EPDs to be comparable, they shall be based on the same PCR (including the same first-digit version number) or be based on fully aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have identical scope in terms of included life-cycle stages (unless the excluded life-cycle stage is demonstrated to be insignificant); apply identical impact assessment methods (including the same version of characterisation factors); and be valid at the time of comparison.
For further information about comparability, see EN 15804 and ISO 14025.

Data quality assessment:

The EPD covers Keraflex Maxi S1 Zero white manufactured in Wacol (Australia) during year 2024. The distribution, application and End of Life (EoL) stages of the EPD cover the European scenario. The production is a discontinuous process, in which all the components are mechanically mixed in batches. The EPD uses background data from Ecoinvent 3.10 and Sphera databases CUP 2024.2, and specific data from suppliers. The quality of the relevant data used for the EPD in terms of its time, geography and technology representativeness using EN 15804:2012+A2:2019, Annex E, E2 is mostly "very good" and "good". The relevant data assessed included "no poor" or "very poor" data.

Process name	Source type	Source	Reference year	Data category	Share of primary data, of GWP GHG results for A1 A3
Manufacturing of product	Collected data	EPD owner	2024	Primary data	2.16 %
Generation of electricity used in manufacturing of product	Database	Ecoinvent 3.11 Sphera	2024	Primary data	3.67%
Transport of raw materials to manufacturing sites	Database	Sphera	2024	Secondary data	0%
Raw materials	EPD, Database	Supplier, Sphera	2023-2024	Secondary data	0%
Total share of primary data, of GWP GHG results for A1- A3					5.83%
Note	The share of primary data is calculated based on GWP GHG results. It is a simplified indicator for data quality that supports the use of more primary data to increase the representativeness of and comparability between EPDs. Note that the indicator does not capture all relevant aspects of data quality and is not comparable across product categories.				

Electricity used in the manufacturing process in A3 (A5 for services):

Type of electricity mix	Residual electricity mix on the market

Method used to calculate residual electricity mix	Country specific Energy Mix based on IEA	

More information on allocation and cut-off:

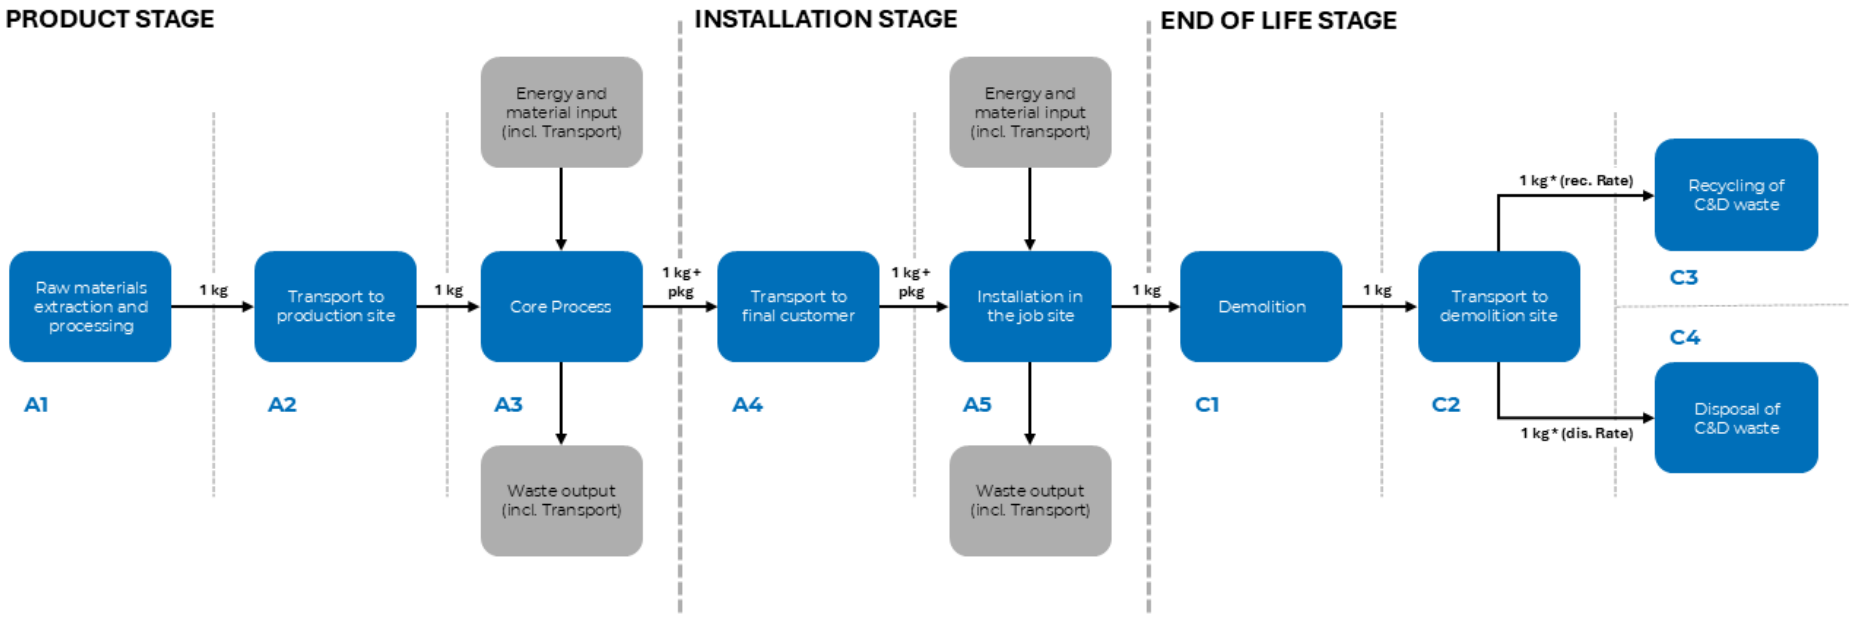
Criteria for the exclusion of inputs and outputs (cut-off rules) in the LCA, information modules and any additional information are intended to support an efficient calculation procedure. They are not applied in order to hide data. Cut-off criteria, where applied, are described below.
Input flows are covered for the whole formula.

Process excluded from study	Cut-off criteria	Quantified contribution from process
A3: production (auxiliary materials)	Less than 10^{-5} kg/kg of finished product	Sensitivity study demonstrates a relative contribution lower than 0,5%

For the allocation procedure and principles consider the following table:

Module	Allocation Principle
A1	All data are referred to 1 kg of product. A1: electricity is allocated to the entire facility
A3	All data are referred to 1 kg of packaged product. A3-wastes: all data are allocated to the entire facility

System flow diagram:



ENVIRONMENTAL PERFORMANCE

LCA results of the product(s) - main environmental performance results

The following tables show the environmental impacts for the products considered according to the requirements of EN15804:2012+A2:2019/AC:2021. The Characterization Factors are based on EF 3.1 package.

The results are referred to the declared unit. In the whole document, the point ". "is the decimal separator, while the comma " , " is the thousands separator.

Reading example: 9.0 E-03 = 9.0*10-3 = 0.009

The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins and/or risks.

We discourage the use of the outcomes from modules A1-A3 without considering the results obtained from module C.

Mandatory impact category indicators according to EN 15804

As such, the indicator is identical to GWP-total except that the CF for biogenic CO_2 is set to zero.									
Disclaimer 2	This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

VOC Emissions

Volatile Organic Compounds (VOC) special tests and evidence have been carried out on the two products, according to ISO 16000 parts 3, 6, 9 and 11 and EN 16516.
The product has been evaluated in emission chambers, in order to detect their VOC emissions after 3 and 28 days storage in the ventilated chambers, according to GEV (Gemeinschaft Emissionskontrollierte Verlegewerkstoffe, Klebstoffe und Bauprodukte e.V.) test method.
The following product meets the requirements for the emission class EMICODE® **EC1^{PLUS}**, as "very low emission", released by GEV:

Keraflex Maxi S1 Zero white: license number - 5437

Next table describes the limits for the EMICODE® EC1^{PLUS} class:
Table 1: EC1^{PLUS} VOC limits

	3 days µg/m³	28 days µg/m³
TVOC (C6-C16)	≤ 750 µg/m^3	≤ 60 µg/m^3
TSVOC (C16-C22)		≤ 40 µg/m^3
C1A-C1B substances	Total ≤ 10 µg/m^3	Single substance ≤ 1 µg/m^3
Formaldehyde/ acetaldehyde	≤ 50 µg/m^3	
Sum of formaldehyde/acetaldehyde	≤ 50 ppb	
sum of non-assessable VOCs		≤ 40
R value		≤ 1
